Mechanical Seals for rotary shafts have to perform as a separating element between the process fluid and the atmosphere; it follows that the safety of people and the environment depend on their performance.

Fluiten, located in Pero-Milan, is an Italian company which has been designing and producing mechanical seals for rotary shafts since 1962.

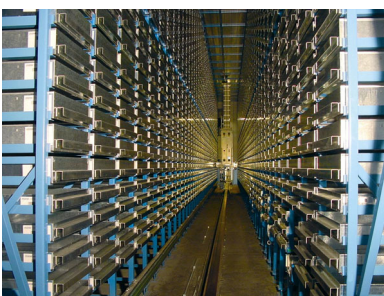

Our customers can rely on a Technical Office highly specialized in designing any kind of customised applications, depending on the characteristics of the equipment and operative parameters.

Fluiten boasts a Metrologic Laboratory that can be considered one of the best equipped in Europe.

Up to date, high precision instruments guarantee an elevated level of accuracy in measuring and testing of mechanical seal components.

The recent installation of a **Robotized Store**, connected with the company informatic system, guarantees short delivery times and cost reductions.

Finally a Service Department, highly flexible and independent from the production system, supplies fast and reliable overhauling of components . Convenient maintenance contracts can be stipulated as well, for a more efficient maintenance scheduling.

Here below the "Program of services".

PROGRAM OF SERVICES

- Inventory of relevant machinery and provision of informatic tools for the operative management

- Analysis of installed configurations and materials in relationship with operative parameters and M.T.B.F.

- Evaluation of late configurations and materials :
 - ✓ Cartridge seals
 - ✓ Modifications to comply with API 682 II ed. and DIN
 - ✓ Dry-Running mechanical seals
 - ✓ Low emissions mechanical seals
 - ✓ Compliance with ATEX 94/9/EC

- Definition of customised contracts to reduce maintenance costs :
 - ✓ Fluiten "Green Line"
 - ✓ Spares store in Customer facility
 - ✓ Global Service contracts

- Stages for maintenance and plant engineers :
 - ✓ Basic seminary
 - ✓ Procedures for installation and start-up
 - ✓ Applications according to API 682 II ed.
 - ✓ Customised stages for specific applications
